DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-3, 8, 12, 15, 18 and 21-23 are rejected under 35 U.S.C. 102(b) as being anticipated by Jessop '769.

Jessop teaches a threaded child resistant closure and container with at least one locking lug 19. The axial height of the lug is relative to the pitch of the screw thread such that a single complete rotation, the locking lug and closure no longer engage. See column 3, lines 34-40. With respect to the two thread thickness, these may be equal and located anywhere along the thread of the closure and container of Jessop. With respect to claim 3, see figure 3 where the lug 17 extends up from a shoulder on the container neck.

3. Claims 1-4, 6, 8, 10, 12-15 and 17-23 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Uhlig '097.

See column 9, lines 14-47 describing the opening the child resistant closure and container. As the (F-1)lug/finger engages the locking lug/projection 15a only one time during removal, the thread pitch can not be less than the axial height of the locking lug multiplied by the number of locking lugs.

Art Unit: 3727

With respect to claims 3, 4, 13, 14 and 19-20, the threads 17, 25 having thinner start and finish ends as shown in the figures. These may be one of the first or second thread segments with the other being the middle, thicker portion of the thread.

Depending upon the which are the first and second thread segments of the threads 17, 25 results in the claimed relationship. For example, in claim 4, the first segment is considered the thread start or finish end that is thinner than the second segment or middle segment of the thread.

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 5, 7 and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Uhlig '097.

Uhlig discloses the claimed invention except for thickness of the thinner and thicker segments of the thread being 0.025 and 0.057 inches respectively, the height of the locking lug being 0.123 inches and the thread pitch being 0.25 inches. It would have been obvious to one having ordinary skill in the art at the time the invention was made to make the thread segments of Uhlig such that the thinner segment is 0.025 and the thicker segment is 0.057 inches, the height of the locking lug is 0.123 inches and the

Art Unit: 3727

thread pitch is 0.25 inches, since it has been held that discovering an optimum value of a result effective variable involves only routine skill in the art. In re Boesch, 617 F.2d 272, 205 USPQ 215 (CCPA 1980).

6. Claims 9 and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Uhlig '097 in view of Virog Jr. et al. '175.

Uhlig teaches everything except for the thread being a double helix type.

Virog Jr. et al. teaches a similar child resistant threaded closure and container wherein the thread is a double helix type which allows for easier removal/less time as the rotation angle through which the closure must be turned for removal is smaller. It would have been obvious to one of ordinary skill in the art at the time the invention was made to make the threads of Uhlig a double helix as taught by Virog Jr. et al. to allow for easier, quicker removal.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Robinson, Nielsen, the two patents to Summers, Montgomery, Clodfelter et al. and Hins teach similar child resistant closures and containers to what applicant is claiming.

Telephone inquiries regarding the status of applications or other general questions, by persons entitled to the information, "should be directed to the group clerical personnel and not to the examiners. In as much as the official records and applications are located in the clerical section of the examining groups, the clerical

Art Unit: 3727

personnel can readily provide status information without contacting the examiners", M.P.E.P. 203.08. The Group clerical receptionist number is (703) 308-1148.

If in receiving this Office Action it is apparent to applicant that certain documents are missing, e.g., copies of references cited, form PTO-1449, form PTO-892, etc., requests for copies of such papers or other general questions should be directed to Tech Center 3700 Customer Service at (703) 306-5648, email CustomerService3700@uspto.gov.

Any inquiry concerning the merits of the examination of the application from the examiner should be directed to Nathan J. Newhouse whose telephone number is (703)-308-4158. The examiner can normally be reached on Monday-Thursday 7:00-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Lee W. Young can be reached on (703)-308-2572. The fax phone numbers for the organization where this application or proceeding is assigned are (703)-872-9302 for regular communications and (703)-872-9303 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703)-308-1148.

Other helpful telephone numbers are listed for applicant's benefit.
